PRODUCT SPECIFICATIONS

Horsepower (Maximum Developed).....	2 HP
Voltage.....	120 V
Amperes.....	15 A
Hertz.....	60 Hz
Phase.....	Single
Motor RPM.....	17,500 RPM
Table Size.....	12-1/2"×9-5/16"
Blade Width.....	12mm
Maximum Depth of Cut.....	.3/32"
Cuts per Minute.....	18,800

MOTOR SPECIFICATIONS

Planer is supplied with a 2 HP motor installed.
The 120 Volt AC universal motor has the following

Specifications:

Horsepower (Maximum Developed)	2 HP
Voltage	120
Amperes	15
Hertz.	60
Phase	Single
Cutterhead RPM	9,400

⚠ WARNING

For your own safety, read and understand all warnings and operating instructions before using any tool or equipment.

⚠ WARNING

Some dust created by the operation of the power tool contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. To reduce your exposure to these chemicals, work in a well ventilated area and work with approved safety equipment. Always wear OSHA/NIOSH approved, properly fitting face mask or respirator when using such tools.

⚠ WARNING

Failure to follow these rules may result in serious personal injury. Remember that being careless for even a fraction of a second can result in severe personal injury.

WORK PREPARATION

- Wear proper apparel. Do not wear loose clothing, gloves, neckties, rings, bracelets or other jewelry which may get caught in moving parts of the tool.
- Nonslip protective footwear is recommended.
- Wear protective hair covering to contain long hair.
- Wear eye and hearing protection. Always use safety glasses. Eye protection equipment should comply with ANSI Z87.1 standards. Hearing equipment should comply with ANSI S3.19 standards.
- Wear face mask or dust mask if operation is dusty.
- Be alert and think clearly. Never operate power tools when tired, intoxicated or when taking medications that cause drowsiness.

WORK AREA PREPARATION

- Keep work area clean. Cluttered work areas and benches invite accidents.
- Work area should be properly lighted.
- Do not use the machine in a dangerous environment. The use of power tools in damp or wet locations or in rain can cause shock or electrocution.
- Three-prong electrical plug should be plugged directly into properly grounded, three-prong receptacle.
- Use a proper extension cord. Make sure your extension cord is in good condition and should have a grounding prong and the three wires of extension cord should be of the correct gauge.
- Keep children and visitors away. Your shop is a potentially dangerous environment. Children and visitors can be injured.
- Make your workshop childproof with padlocks, master switches or remove switch keys to prevent any unintentional use of power tools.

TOOL MAINTENANCE

- Turn the machine "OFF", and disconnect the machine from the power source prior to inspection.
- Maintain all tools and machines in peak condition. Keep tools sharp and clean for best and safest performance.
- Follow instructions for lubricating and changing accessories.
- Check for damaged parts. Check for alignment of moving parts, binding, breakage, mounting and any other condition that may affect tool's operation.
- Poorly maintained tools and machines can further damage the tool or machine and/or cause injury.
- A guard or any other part that is damaged should be repaired or replaced. Do not perform makeshift repairs.

TOOL OPERATION

- Avoid accidental start-up. Make sure that the tool is in the "OFF" position before plugging in.
- Use the right tool for your job. Do not force your tool or attachment to do a job for which it was not designed.
- Disconnect tool when changing parts.
- Don't force the workpiece on the machine. Damage to the machine and/or injury may result.
- Never leave tool running unattended. Turn the power off and do not leave tool until it comes to a complete stop.
- Do not overreach. Loss of balance can make you fall into a working machine, causing injury.
- Never stand on tool. Injury could occur if the tool tips, or if you accidentally contact the cutting tool.
- Know your tool. Learn the tool's operation, application and specific limitations before using it.
- Use recommended accessories. Use of improper accessories may cause damage to the machine or injury to the user.
- Handle workpiece correctly. Keep hands away from moving parts.
- Turn tool off if it jams.

CAUTION: Think safety! Safety is a combination of operator common sense and alertness at all times when tool is being used.

⚠ WARNING

Do not attempt to operate tool until it is completely assembled according to the instructions.

UNPACKING

- Check for freight damage before opening the package. If freight damage is noticed, file a claim with the carrier immediately.
- Check to ensure all parts are accounted for. If any parts are missing, please contact the customer service center at 1-847-780-6120.
- This Planer comes mostly assembled. It requires some additional assembling, installation, and adjustment before use.
- Locate the following parts before assembling:

- A. Planer
- B. Elevation Crank Handle Assembly (including M5 bolt, flat washer and plug)
- C. Magnet (2)
- D. T Wrench

Figure 1 Unpacking

INSTALL ELEVATION CRANK HANDLE

Refer to Figure 2 and 3

- The planer handle can be installed to the top-right of the planer.
- Insert handle onto elevation screw top.
- Secure handle with bolt and flat washer using the enclosed wrench.
- Insert plug into handle

Figure 2 - Install Handle

Figure 3 - Secure Handle

WARNING

Do not use the machine until it is completely assembled and you have read and understood the entire operating manuals.

- The machine must be installed in a well-lit area with correct power supply.
- There must be enough clearance for the moving workpiece during operation. There must be enough room for safe operation of the machine.

POWER SOURCE

WARNING

Do not connect to the power source until the machine is completely assembled.

The machine is wired for 120 Volts, 60 Hz alternating current. Before connecting the machine to the power source, make sure the switch is in the "OFF" position. Running the unit on voltages which are not within range may cause overheating and motor burn-out. Heavy loads require that voltage at motor terminals be no less than the voltage specified on nameplate.

- Power supply to the motor is controlled by a locking rocker switch. Remove the key to prevent unauthorized use.

GROUNDING INSTRUCTIONS

WARNING

Improper connection of equipment grounding conductor can result in the risk of electrical shock.

- The machine should be grounded while in use to protect operator from electrical shock.
- In the event of an electrical short circuit, grounding reduces the risk of electrical shock by providing an escape wire for the electricity.
- This machine is equipped with an approved 3-conductor cord rated at 120V and a 3-prong grounding type plug (Figure 4) for your protection against shock hazards.
- Grounding plug should be plugged directly into a properly installed and grounded 3-prong grounding-type receptacle, as shown (Figure 4).
- The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances.
- Check with a qualified electrician or service personnel if these instructions are not completely understood or if in doubt as to whether the tool is properly grounded.
- Do not modify plug provided. If it will not fit in outlet, have proper outlet installed by a qualified electrician. Use only 3-wire extension cords, that have 3-prong grounding type plugs and matching 3-conductor receptacles that accept the machine's plug, as show in Figure 4.

Figure 4 - 3-Prong Receptacle**⚠ WARNING**

Do not permit fingers to touch the terminals of plug when installing or removing from outlet.

- Inspect tool cords periodically, and if damaged, have repaired by an authorized service facility.
- The conductor with insulation having an outer surface that is green with or without yellow stripes is the equipment-grounding conductor. If repair or replacement of the electric cord or plug is necessary, do not connect the green (or green and yellow) wire to a live terminal.

A temporary 3-prong to 2-prong grounding adapter (see Figure 5) may be used to connect this plug to a matching 2-conductor receptacle as shown in figure 5. The temporary adapter should be used only until a properly grounded outlet can be installed by a qualified electrician.

Figure 5 - 2-Prong Receptacle

In Canada, the use of temporary adapter is not permitted by the Canadian Electric Code. Where permitted, the rigid green tab or terminal on the side of the adapter must be securely connected to a permanent electrical ground such as a properly grounded water pipe, a properly grounded outlet box or a properly grounded wire system.

- Many cover plate screws, water pipes and outlet boxes are not properly grounded. To ensure proper ground, grounding means must be tested by a qualified electrician.

EXTENSION CORDS

Use proper extension cords. Make sure the extension cord is in good condition. Use only 3-wire extension cords that have 3-prong grounding type plugs and 3-pole receptacles which accept the tool plug. When using an extension cord, make sure to use one heavy enough to carry the current of the machine. An undersized cord will cause a drop in the voltage, resulting in loss of power and overheating. Use the table to determine the minimum wire size (A.W.G.) extension cord.

Extension Cord Length

Wire Size	A.W.G.
Up to 25 ft.	18
25 to 50 ft.	16

NOTE: Using extension cords over 50 ft. long is not recommended.

ELECTRICAL CONNECTIONS**⚠ WARNING**

- Turn the switch off and disconnect the machine from power source before performing any repair or maintenance work.
- Some electrical wiring and connection work must be performed by a qualified electrician in accordance with local regulations.
- There is a green grounding wire fastened to the frame of the machine to provide shock protection. Do not disconnect the grounding wire from the frame.
- The motor is rated for used at 120 Volts.
- Connect this machine to 3-Conductor power outlet with appropriate rating only.
- Use only 3-pronged extension power cord with appropriate rating with this machine.
- When changing the power cord, use only 3-pronged power cord with appropriate rating.
- The power switch is a single pole rocker switch with locking mechanism. Remove the key when not in use to prevent accidents.

WARNING

For our own safety, read the entire operating manual and safety instructions before using this tool.

SAFETY PRECAUTIONS

- Be aware of general power tool safety. Make sure all the safety rules are understood.
- Disconnect the machine from power source whenever adjusting or replacing any parts.
- Do not plug planer in unless switch is in the "OFF" position.
- Keep hands away from all moving parts.
- Wear eye protection or face shield during operation.
- Make sure all mobile parts move freely and are free from interference.
- Keep blades sharp, aligned and properly attached cutterhead.
- Properly secure the blades in the cutterhead.
- Never turn the machine "ON" with the workpiece contacting the cutterhead.
- Never make cuts deeper than 3/32" (2.4mm) to prevent kickback.
- Do not force cut. Slowing or stalling will overheat the motor.
- Do not perform planing on workpiece shorter than 15", narrower than 3/4", wider than 12 1/2" or less than 1/8" thick.
- Properly support long or wide workpieces.
- Do not use a workpiece that is warped, contains knots, or is embedded with foreign objects (nails, staples, etc) to prevent kickback.
- Do not feed a workpiece into the planer outfeed table.
- Do not allow anyone to stand or cross in line of cutterhead rotation. Kickback or thrown debris will travel in this direction.
- Turn switch off and disconnect power whenever planer is not in use.
- Keep planer maintained. Follow maintenance instructions.

ROLLERCASE HEIGHT ADJUSTMENT

Refer to Figure 6

- Rollercase is the centerpiece of the planer machine. It contains motor, cutterhead with blades, infeed and outfeed rollers, dust collection assembly.
- The rollercase can be moved up or down precisely by rotating the elevation crank handle on the top of planer. One complete turn of elevation crank handle is equivalent to 1/16" movement of rollercase in either direction.

- There is an elevation scale at the front of right side panel. It has a pointer with English and Metric scale. The reading is the height of cutterhead from the table platform. Therefore, the elevation scale setting represents the approximate thickness of the workpiece after planing.
- Elevation scale is calibrated in factory and should have reasonable accuracy. For woodworking of precision, use of calipers after each planing is recommended.

Figure 6

DEPTH OF CUT

Refer to Figure 6

- The depth-of-cut is the thickness of wood material removed from the surface of workpiece during each pass. The depth-of-cut is determined by the relative position of the rollercase to the top of workpiece.
- To protect long use life of motor and cutterhead unit, the recommended maximum depth-of-cut are:
 - 3/32" for workpiece up to 5" wide**
 - 1/16" for workpiece from 5" to 12 1/2" wide**

ON/OFF SWITCH

Refer to Figure 7 and 8

The ON/OFF switch is located on the front of planer. To turn the machine ON, pull the switch to the up position. To turn the machine OFF, push the switch to the down position.

NOTE: When the machine is not in use, the machine should be locked in the "OFF" position to prevent unauthorized use.

- To lock the machine, turn the switch to the "OFF" position. Pull the key out. The switch cannot be turned on without the key.
- If the key is removed when the switch is at the "ON" position, the switch can be turned off but cannot be turned on again.
- To unlock, place the key into the slot on switch unit until it snaps.

Figure 7 – ON/OFF Switch

Figure 8

CIRCUIT BREAKER

Refer to Figure 8

- This machine has a circuit breaker installed next to the main power switch. The circuit breaker protects the motor unit by shutting off the power supply when excessive electric current is detected. If the circuit breaker is tripped, the machine will not power on.
- Before resetting the circuit breaker, check motor, switch, and line connection for short circuit or faulty components.

- To reset the circuit breaker, Turn the switch to "OFF" position. Then press the circuit breaker reset button next to the main switch.

BEFORE OPERATING THE PLANER

- Understand the machine function and observe all the safety measurement.
- In general, the desired depth-of-cut and final thickness of a workpiece are determined before planing. Since there is a limit of maximum depth-of-cut, the workpiece may have to be passed through the machine several times before reaching the desired final thickness.
- The rollercase has to be lowered manually before each pass, if more than one pass is necessary.
- The planer machine setting involves readings of elevation scale and operation of the rollercase elevation crank handle.
- The rollercase elevation crank handle controls rollercase position in height and determines the amount of wood material to be removed (depth-of-cut) in each pass. Thickness of the remaining workpiece, after planing (final thickness), is observed in elevation scale.
- In general, thin depth-of-cut produces better outcome: smooth surface, even thickness, less kickback, less snipe, even thickness, less wear on cutterhead and motor.
- Set thin depth-of-cut for hardwood, wide workpiece, and uneven surface.
- This planer machine is designed to process natural wood material only.
- Remove glue and any foreign objects from the workpiece before planing.
- Avoid wood stock with many or large knots.
- Avoid wood stock with excessive twisting, cupping, or bowing.
- If necessary, process one side with jointer machine first to obtain at least one flat surface before using the planer machine.
- For better outcome, plane both sides of wood board with $\frac{1}{2}$ of depth removed from each side. This will produce two smooth surfaces with equal amount of moisture content. The board is less likely to warp when it dries naturally.
- Test cut with similar wood material for better accuracy.
- The Minimal length of workpiece that can be processed is 15". The minimal width is $\frac{3}{4}$ ". The minimal thickness is $\frac{1}{8}$ ". (This is not to be confused with depth-of-cut.)
- The maximal width of workpiece that can be processed is 12 $\frac{1}{2}$ ". The maximal thickness is 6".
- To protect long use life of motor and cutterhead unit, the recommended maximum depth-of-cut are:
 $\frac{3}{32}$ " for workpiece up to 5" wide
 $\frac{1}{16}$ " for workpiece from 5" to 12 $\frac{1}{2}$ " wide
- Use additional roller stand for workpiece longer than 24".

OPERATE THE PLANER MACHINE

- Always use protective safety wear and observe safety rules.
- Never stand directly in the pathway of the workpiece, including infeed and outfeed, to avoid injury. The operator should stand on the side of the elevation crank handle.
- Feed the workpiece with the grain as much as possible. That is, at the contact point, the grain points to the same direction as that of rotating cutterhead. For this planer machine, the grain direction on the top of the workpiece should point towards the front of the machine.
- Place the workpiece on the infeed table. The surface to be planed should be faced up.
- With the planer properly set up, turn the machine on.
- Hold the workpiece firmly and advance towards the infeed roller slowly.
- Stop pushing or pulling the workpiece once it is engaged by the infeed roller.
- The infeed roller will move the workpiece automatically through the planer.
- For long workpiece, gently support the weight of the workpiece while it is moved in and out of the planer to stabilize the workpiece and decrease snipe.
- Move to the back of machine to receive the workpiece. Do not pull.
- Use the return roller on the top of the planer to help transport big workpiece back to infeed side.
- Use the entire width of the cutterhead to avoid uneven wear of knives.
- For precision woodworking, measure thickness with calipers after each planing.

WARNING

Turn the switch to the OFF position and disconnect the machine from power source before any maintenance.

CHECK AND REPLACE THE BLADES

Refer to Figure 9 and 10

- Locate the blade cover on the back of planer. Loosen and remove thumb screws from blade guard.
- Identify the cutterhead inside. Watch for TWO sharp blades on the cutterhead.
- Without touching the blades, carefully turn the cutterhead until it stops by the self-engaging latch.
- Use T Wrench to remove 6 bolts on the blade assembly.
- Attach 2 provided magnets to the gib and carefully remove it.
- Attach 2 provided magnets to the blades and carefully remove it.
- Check to see if the blade is dull, worn, nicked, torn, and uneven. These can result in poor performance such as fuzzy grain, chipped grain, raised grain, raised edge, and uneven cut.
- Replace with new blades in pairs only. Never mix new blade with old blade on the cutterhead. Never mix blades with different degrees of wear. Never use a blade where unbalanced wear from side to side is present.
- To replace with the new blade, use the 2 provided magnets to transfer the blade onto the cutterhead. Position the blade so it sits securely on the two pins.
- Use the 2 provided magnets to transfer the gib onto the blade. Position the gib so the 6 holes are aligned with the holes on the cutterhead.
- Tighten and secure with 6 bolts.
- To access the other blade assembly, gently pull and hold the latch on the side of cutterhead to release it. Once the cutterhead rotates, release the latch.
- Without touching the blades, carefully turn the cutterhead until it stops the self-engaging latch.
- Repeat the same procedure to check and replace the other blade.
- Replace the blade cover and secure with the two thumb screws.

Figure 9

Figure 10

INSPECT AND REPLACE THE MOTOR BRUSHES

- Turn the switch to the "OFF" position and disconnect the planer machine from the power source.
- Inspect the motor brushes after every 100 hours of use. Brush life varies, depending on the motor loads.
- Replace the motor brushes in set (two brushes) only. Replace with new parts only.
- To inspect motor brushes, unscrew brush caps on the sides of motor. There are two caps, one on each side of motor.
- Remove brush assembly from motor.
- Replace motor brushes if the length of carbon has been worn to less than 3/8", or if the springs are worn, or if the motor does not run smoothly.
- Replace with new motor brush assembly.
- Replace the brush cap and tighten the screw.
- Repeat the same procedure on the other side of motor.

ADJUST ROLLERCASE LEVEL

Refer to Parts Illustration

The rollercase level is checked in factory and should work properly. However, it can become out of alignment during shipping and handling.

- If the rollercase is not level with the base, the depth-of-cut will not be even from side to side. The end result is tapered cut where the thickness on one side is different from the other side. This can result from uneven wear of the blade as well. Check to see blades are in good working order.
- Test run with two test pieces on right and left ends of the planer to determine the amount needed to be corrected.
- Turn planer off and disconnect from power source. Carefully place the planer on its back.
- Clamp vise plier (not provided) on the left side of shaft (fix spacing) next to the gear.
- Remove retaining ring and disengage right gear from the top gear.
- Slowly rotate handle to raise or lower rollercase. Rollercase will move by 0.006" with every turn of the gear by one tooth. Move rollercase to the required distance to offset the taper.
- Re-engage and remove vise plier.
- Sit the planer upright carefully.
- Test run the planer to check the rollercase level adjustment.
- Repeat the procedures if further adjustment is necessary.

REPLACE V-BELT

Refer to Parts Illustration

Inadequate tension in the V-belt will cause the belt to slip from the motor pulley or drive pulley. A loose belt from must be replaced.

- Turn planer off and unplug from power source.
- Loosen and remove screws on right cap. Remove panel.
- Remove old belt by walking the belt from motor and drive pulleys alternatively. Gently pull the belt outward while turning the pulleys at the same time.
- Replace with new belt. Walk the belt on the pulleys in the reverse manner as when removing the belt.
- Make sure belt is evenly seated all the way on the motor and drive pulley grooves.
- Replace and secure right panel.

CLEANING AND LUBRICATION

- Vacuum the planer machine to remove wood chips, saw dust, and debris.
- Use a cleaning solution (not included) to remove resin and grease residue.
- Check and empty dust collection bag.
- Remove saw dust, wood chips, and grease from chains and gears.
- The bearings in motor and cutterhead units are permanently sealed in factory and should require no further lubrication.
- Three components require regular lubrication: rollercase elevation screws (2x), the columns (4x), and the feed roller chain drive. Remove the top and both side panels to access these components.
- Remove old grease residues, with minerals spirits if necessary, then apply a coat of light grade multi-purpose grease (not included.)
- Chain drive should be cleaned before lubrication. Use spray oil (not included) to lubricate the chain. The chain should be wiped dry after the lubricant has had enough time to penetrate the links.
- The work table and extension table can be coated with very thin lubricating wax (not included) to protect the surface from rust and to facilitate smooth feed during operation.

SYMPTOM	POSSIBLE CAUSE(S)	SOLUTIONS
Motor will not start	<ol style="list-style-type: none"> 1. Low voltage 2. Short circuit in line cord or plug 3. Short circuit in motor 4. Open circuit or loose connection in motor 5. Incorrect fuses or circuit breakers 6. Defective switch 7. Motor overload results in circuit breaker tripped 	<ol style="list-style-type: none"> 1. Check power supply for proper voltage 2. Inspect line cord and plug for faulty insulation or shorted connection 3. Inspect connection on motor 4. Inspect connection on motor 5. Replace with correct fuses or circuit breakers 6. Replace switch 7. Turn the machine off and reset overload protection.
Motor stalls or fails to reach full speed	<ol style="list-style-type: none"> 1. Power overload 2. Low voltage from power supply 3. Undersized line cord 4. Motor overload 5. Short circuit or loose connection in motor 6. Incorrect fuses or circuit breakers 7. Wood chips clogged 	<ol style="list-style-type: none"> 1. Reduce workload on the power supply 2. Check power supply for proper voltage 3. Use line cord of adequate size or reduce length of wiring 4. Reduce load on motor 5. Inspect the connection in motor for loose or shorted connection 6. Replace with correct fuses or circuit breakers 7. Inspect chip blower assembly and fan belt. Remove excessive wood chips
Motor overheats	<ol style="list-style-type: none"> 1. Motor overloaded 2. Excessive dust build-up results in decreased air circulation 	<ol style="list-style-type: none"> 1. Reduce load on motor. Turn off the machine until motor cools down 2. Remove dust build-up
Frequent tripping of circuit breaker	<ol style="list-style-type: none"> 1. Motor overload 2. Inadequate capacity of circuit breaker 3. Circuit overload 4. Blades are dull 	<ol style="list-style-type: none"> 1. Reduce load on motor 2. Replace with correct circuit breaker 3. Reduce circuit load 4. Sharpen or replace blades
Snipe	<ol style="list-style-type: none"> 1. Inadequate support of workpiece 2. Blades are dull 3. Uneven force on cutterhead 4. Rollerbase is not level with planer base 5. Workpiece is not butted properly 	<ol style="list-style-type: none"> 1. Support long workpiece with additional platform 2. Replace blades 3. Push workpiece gently during operation 4. Adjust table and rollerbase level properly 5. Butt end to end each workpiece as it passes through planer
Surface not smooth	<ol style="list-style-type: none"> 1. Blades are dull 2. Fuzzy grain due to high moisture content in wood 3. Torn grain due to blades cutting against grain 4. The cut is too deep 	<ol style="list-style-type: none"> 1. Replace blades 2. Use dry wood 3. Change direction and feed workpiece along grain 4. Decrease depth of cut
Uneven thickness from side to side	Rollerbase is not positioned level with planer base	Adjust table and rollerbase level properly

SYMPTOM	POSSIBLE CAUSE(S)	SOLUTIONS
Difficulties in adjusting roller case elevation	<ol style="list-style-type: none"> 1. Worn elevation screws 2. Dirty elevation screws or columns 3. Dirty chains or sprockets 4. Roller case is not positioned level with planer base 5. Friction between roller case and covers 	<ol style="list-style-type: none"> 1. Release roller case lock 2. Replace elevation screws 3. Clean and lubricate elevation screws and columns 4. Clean and lubricate chains and sprockets 5. Adjust table and roller case level properly 6. Clean and adjust roller case
Wood thickness does not match depth of cut setting	Indicator is not set correctly	Adjust and tighten indicator properly
Chain jumping	<ol style="list-style-type: none"> 1. Worn chains 2. Worn Sprockets 	<ol style="list-style-type: none"> 1. Replace chains 2. Replace sprockets
Belt slipping	Belt is loose	Replace V-belt
Excessive fan noise	<ol style="list-style-type: none"> 1. Loose fan assembly 2. Large wood chips stuck in fan housing 	<ol style="list-style-type: none"> 1. Inspect fan assembly and tighten fan screws 2. Turn machine off, remove blade guard, and clean the chamber

Thank you for investing in a **POWERTEC** power tool. This product has been designed and manufactured to meet high quality standards and is guaranteed for domestic use against defects in workmanship or material for a period of 12 months from the date of purchase. This guarantee does not affect your statutory rights.

SOUTHERN TECHNOLOGIES LLC. BENCH TOP AND STATIONARY POWER TOOL LIMITED 1 YEAR WARRANTY AND 30-DAY SATISFACTION GUARANTEE POLICY

POWERTEC products are designed and manufactured by **Southern Technologies LLC**. All warranty communications should be directed to **Southern Technologies LLC** by calling 1-847-780-6120, 9 AM to 5 PM, Monday through Friday, US Central Time.

30- DAY SATISFACTION GUARANTEE POLICY

During the first 30 days after the date of purchase, if you are dissatisfied with the performance of this **POWERTEC** tool for any reason, you may return the tool to the retailer from which it was purchased for a full refund or exchange. You must present proof of purchase and return all original equipment packaged with the original product. The replacement tool will be covered by the limited warranty for the remainder of the one year warranty period.

LIMITED ONE YEAR WARRANTY

This warranty covers all defects in workmanship or materials in this **POWERTEC** tool for a one year period from the date of purchase. This warranty is specific to this tool. **Southern Technologies, LLC** reserves the right to repair or replace the defective tool, at its discretion.

HOW TO OBTAIN SERVICE

To obtain service for this **POWERTEC** tool you must return it, freight prepaid, to **POWERTEC**. You may call 1-847-780-6120 for more information. When requesting warranty service, you must present the proof of purchase documentation, which includes a date of purchase. **POWERTEC** will either repair or replace any defective part, at our option at no charge to you. The repaired or replacement unit will be covered by the same limited warranty for the remainder of the one year warranty period.

WHAT IS NOT COVERED

This warranty applies to the original purchaser at retail and may not be transferred.

This warranty does not cover consumable items such as saw blades, knives, belts, discs, cooling blocks and sleeves. This warranty does not cover required service and part replacement resulting from normal wear and tear, including accessory wear.

This warranty does not cover any malfunction, failure or defect resulting from:

- 1) misuse, abuse, neglect and mishandling not in accordance with the owner's manual.
- 2) damage due to accidents, natural disasters, power outage, or power overload.
- 3) commercial or rental use.
- 4) alteration, modification or repair performed by persons not recommended by **POWERTEC**.

DISCLAIMER

To the extent permitted by applicable law, all implied warranties, including warranties of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE, are disclaimed. Any implied warranties, that cannot be disclaimed under state law are limited to one year from the date of purchase. **Southern Technologies LLC**. is not responsible for direct, indirect, incidental or consequential damages. Some states do not allow limitations on how long an implied warranty lasts and/or do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. **Southern Technologies LLC.**, makes no warranties, representations, or promises as to the quality or performance of its power tools other than those specifically stated in this warranty.

ADDITIONAL LIMITATIONS

To the extent permitted by applicable law, all implied warranties, including warranties of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE, are disclaimed. Any implied warranties, including warranties of merchantability or fitness for a particular purpose, that cannot be disclaimed under state law are limited to one year from the date of purchase. **Southern Technologies LLC.** is not responsible for direct, indirect, incidental or consequential damages. Some states do not allow limitations on how long an implied warranty lasts and/or do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.
